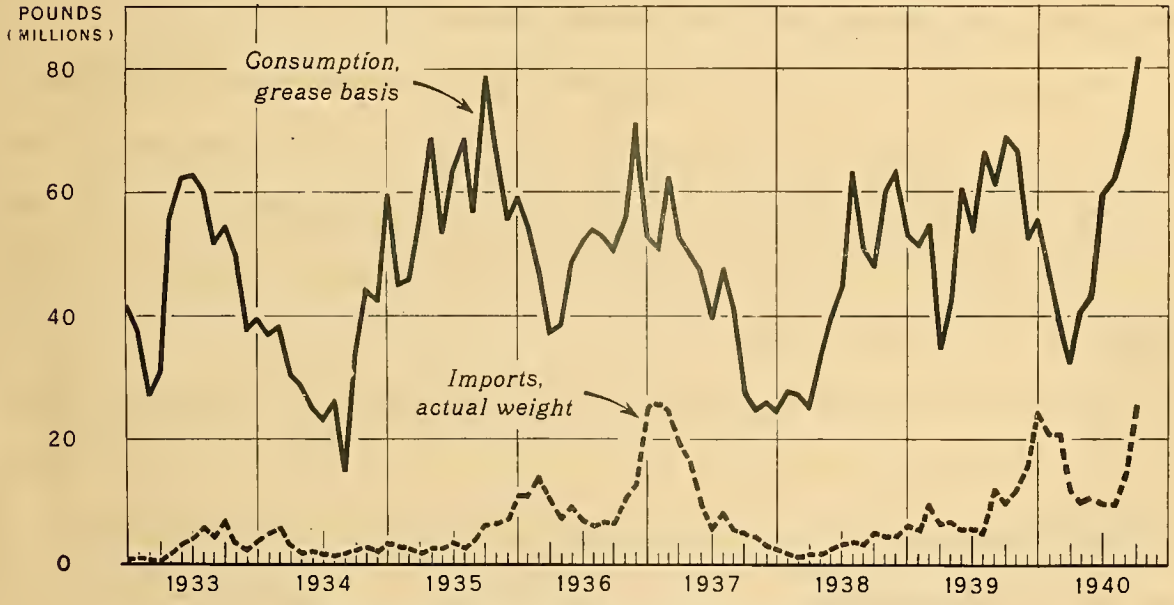
WOOL APPAREL: MILL CONSUMPTION AND IMPORTS FOR CONSUMPTION IN THE UNITED STATES, 1933-40



CONSUMPTION, ESTIMATES OF NEW YORK WOOL TOP EXCHANGE SERVICE
IMPORTS: BUREAU OF FOREIGN AND DOMESTIC COMMERCE

U. S. DEPARTMENT OF AGRICULTURE NEG. 32651 BUREAU OF AGRICULTURAL ECONOMICS

DOMESTIC MILL CONSUMPTION OF APPAREL WOOL HAS INCREASED RAPIDLY SINCE MAY, REFLECTING LARGE ARMY CONTRACTS FOR WOOL GOODS. CONSUMPTION IN OCTOBER WAS AT THE HIGHEST LEVEL SINCE 1918, AND IS EXPECTED TO CONTINUE AT A RELATIVELY HIGH LEVEL IN THE NEXT SEVERAL MONTHS. IMPORTS OF APPAREL WOOL FOR THE CURRENT WOOL SEASON (TO APRIL 1, 1941) ARE LIKELY TO BE LARGER THAN FOR ANY RECENT YEAR.

THE WOOL SITUATION

Summary

Under the stimulus of large orders for Army materials, domestic mill consumption of apparel wool has reached the highest level since 1918 and is likely to continue at a high level into 1941. The high rate of consumption in prospect will tend to support prices of domestic wools. But with imports entering the United States in relatively large quantities, prices of domestic wools in the next several months will be influenced to a considerable extent also by the prices paid for imported wools.

United States imports of apparel wool for consumption totaled 158.5 million pounds in the first 10 months of this year. The January-October imports were larger than those for the same months of any recent year. Imports of apparel wool in October, amounting to 25.6 million pounds, were the largest monthly total since early 1937.

Mill consumption of apparel wool in the United States in October continued the improvement which began in May. Consumption was 15 percent larger than a year earlier, and the monthly total was the largest since June 1918. Consumption on a scoured basis in the first 10 months of this year was about the same as in the corresponding period last year.

On November 20 bids were invited for substantially all wool goods to be purchased by the Army during the remainder of the fiscal year ending June 30, 1941. It is roughly estimated that the new orders will require 30 to 40 million pounds of grease wool. Total wool fabrics ordered for the Army from June 1, 1940 to June 30, 1941 probably will require about 200 million pounds of wool, greasy shorn basis, chiefly fine domestic wools.

Production of wool in the five principal producing countries of the Southern Hemisphere in 1940-41 is estimated to be about 4 percent smaller than in 1939-40, but about 5 percent larger than the average for the 5 years 1934-38. Most of the apparel wool entering international trade is produced in these countries. The decline this year is chiefly in Australia, where almost half of the Southern Hemisphere clip is produced. The carry-over of wool into the current season in the Southern Hemisphere was somewhat larger than that of a year earlier.

-- December 11, 1940

REVIEW OF RECENT DEVELOPMENTS

Prices firm at Boston in November

November sales of domestic wools at Boston were relatively small. Prices remained quite firm. The greater part of the wool sold at Boston in November was South American wool, principally fine and 1/2 blood grades. Prices of such wools advanced moderately in the early part of the month. The Boston office of the Agricultural Marketing Service reports that South American wools received the greater part of the demand in November largely because they comprised the bulk of the immediately available supply of fine and 1/2 blood grades at Boston. Offerings of fine and 1/2 blood domestic wools were very light and many of the wools on hand were held at prices considerably above prices users were willing to pay.

Boston quotations on graded fine combing (staple) territory wools averaged $1.08 a pound throughout November, and prices of combing 3/8 blood territory wool averaged 88.5 cents a pound. Country packed lots of 3/8 and 1/4 blood bright fleece wools sold at 43-45 cents a pound at the end of November, compared with 45-46 cents a month earlier. Prices of domestic wool at Boston at the end of November were higher than a year earlier.

The United States average price of wool received by farmers was 31.5 cents a pound on November 15 compared with 29.9 cents on October 15 and 27.6 cents on November 15, 1939.

Imports up sharply in October

Imports of apparel wool for consumption 1/ totaled 25.6 million pounds in October compared with 15.2 million pounds in September and 9.4 million pounds in October 1939. Imports in the first 10 months of this year, totaling

1/ Wool entered for immediate consumption plus wool withdrawn from bonded warehouses for consumption.

158.5 million pounds, were larger than in any recent year. Imports from January through October last year totaled 70 million pounds. Imports of carpet wool for consumption increased slightly in October but were smaller than in October 1939. Imports of carpet wool in the first 10 months of this year totaled 109 million pounds compared with 124 million pounds in the same months last year and a 5-year (1934-38) average for those months of 106 million pounds.

Wools grading finer than 56s continued in October to form the greater part of the apparel wool imports. Imports of such grades in the first 10 months of this year were more than three times as large as in the same months of last year, and imports of wools grading 44s to 56s were more than twice as large, but imports of wools grading 36s to 44s inclusive were smaller than in the same months last year.

Apparel wool: Imports for consumption by grades, United States, January-October 1939-40 and October 1940

Grades	Actual weight 1/		
	Jan.-Oct.		Oct.
	1939	1940	1940
	1,000 pounds	1,000 pounds	1,000 pounds
Finer than 56s	30,327	102,659	17,155
46s-56s	13,644	32,146	5,146
40-44s	5,965	5,136	517
Not finer than 40s	20,493	18,575	2,780
Total apparel	70,429	158,516	25,598

Compiled from official records of the Bureau of Foreign and Domestic Commerce.
1/ Weight of greasy scoured and skin wool added together.

October mill consumption highest since 1918

The weekly average mill consumption of apparel wool in October was 7,848,000 pounds, scoured basis. The October consumption was 15 percent larger than a year earlier and the monthly total was the largest since June 1918. Mill consumption of apparel wool has more than doubled since April - the low point of this year. Consumption from January through October of this year was equivalent to 498 million pounds greasy shorn and pulled. In the same months of last year consumption on a grease basis totaled 525 million pounds. Consumption of carpet wool increased in October and exceeded that of the corresponding month a year earlier for the first time since May.

Unfilled orders for wool goods relatively large as result of Army orders

Unfilled orders for woven cloth reported by mills on September 28 were only slightly larger than a year earlier but were almost twice as large as orders held at the end of September 1938, according to statistics published by the National Asscciation of Wool Manufacturers. Unfilled orders were

relatively high at the end of September last year, as a result of the heavy buying which followed the outbreak of the European war. Orders declined during the final quarter of 1939 and first quarter of 1940.

A considerable part of the unfilled orders for men's wear material reported at the end of September consisted of Army contracts. Orders for men's wear material for civilian use were much smaller than a year earlier, but orders for women's wear were slightly larger than at the end of September last year. With additional Army contracts for about 16 million yards of wool serge and shirting placed in October and with an increase in orders for civilian wear reported by commercial sources, it is likely that unfilled orders for men's wear at the end of October exceeded 50 million yards.

Unfilled orders for woven cloth reported by 119 mills beginning of each quarter, 1938-40 1/

Compiled from Monthly Statistics of Wool Manufacture, published by the National Association of Wool Manufacturers. Statistics are for cloth containing by weight over 25 percent of yarns spun on the woolen and worsted system. Cloth less than 50 inches wide reported in equivalent 54-inch yardage.

1/ Reports are for specified dates, near the beginning of each quarter.

2/ Excludes cloth with pile or jacquard design.

3/ September 28.

United States principal buyer in Argentine market in November

United States buyers continued to purchase relatively large quantities of wool in Argentina in November. Demand was particularly strong for fine wools. Prices advanced on wool of all grades in the early part of November, but prices of coarse crossbred wools declined slightly in the latter part of

the month. The Swedish Government Purchasing Board contracted for fine and medium crossbred wools in November for shipment via Vladivostok, and Japan purchased small quantities of inferior coarse crossbred wools. Arrivals of new clip wools were more liberal in November.

Shipping companies reported heavy bookings for shipment of wool to the United States in December and January. Exports of wool in October by countries of destination were reported as follows: United States 17,549,000 pounds, Japan 137,000 pounds, Mexico 24,000 pounds, Brazil and Chile 15,000 pounds, a total of 17,725,000 pounds. Exports in October 1939 totaled 14,956,000 pounds and were shipped chiefly to the United States.

Prices firm in Uruguay, clip moving rapidly out of first hands

Sales of wool in Uruguay were large in October and the early part of November, and prices advanced moderately. In the latter part of November activity was curtailed, probably as a result of a shortage of shipping space to the United States. Prices remained firm through November. Commercial sources estimated in late November that about 50 million pounds had already been sold in the current season, of which about 40 million pounds were for United States account.

Exports from Uruguay in October by countries of destination were as follows: United States 8,797,000 pounds, Japan 325,000 pounds, Mexico 116,000 pounds, and Greece 63,000 pounds, a total of 9,301,000 pounds. In October 1939 exports totaled 4,488,000 pounds, and were shipped chiefly to the United States.

OUTLOOK

BACKGROUND.- Mill consumption of apparel wool in the United States declined sharply from October 1939 through April 1940, and wool prices declined in the first half of 1940. Since May, wool consumption has increased rapidly, reflecting in part the manufacture of materials for large Army contracts. This increase in consumption has been accompanied in recent months by an increase in domestic wool prices.

United States imports of apparel wool were relatively large in the latter part of 1939 and in 1940, but stocks in this country remained smaller than the average stocks of recent years.

As the wool outlook has not changed materially in the past month, the following important points have been summarized from the November issue of The Wool Situation:

(1) Mill consumption of apparel wool during the remainder of the current wool season (to April 1, 1941) will be considerably greater than in the corresponding period a year earlier. This increase in consumption will reflect chiefly the large Army contracts for wool goods awarded in recent months.

(2) The increase in mill consumption will be accompanied by a large increase in imports during the coming winter and spring. Because of the large use of fine wools in Army materials, United States import requirements in the next several months will be for relatively large quantities of fine wools.

(3) For the calendar year 1941 domestic mill consumption of wool probably will be larger than it was in 1940. The increase is expected to result in part from a greater consumption of wool for civilian purposes in 1941, but consumption for Army requirements will be relatively large. The high level of mill consumption in prospect for next year will be an important supporting factor to prices of wool from the 1941 clip in the United States.

Army announces wool purchases planned for remainder of 1940-41 season

On November 20 bids were invited by the Quartermaster Depot at Philadelphia for substantially all wool goods to be purchased by the Army and Civilian Conservation Corps during the remainder of the fiscal year ending June 30, 1941. The announcement of the total requirements made by the Office of the Coordinator of National Defense Purchases is expected to permit manufacturers of wool goods to make necessary arrangements to take care of Government and civilian needs for the next several months with assurance that no further large orders are planned during that time.

The terms of this offering require no deliveries before March and will permit manufacturers to spread deliveries at the rate of 20 or 25 percent monthly until about August 1, 1941. This delivery schedule is expected to permit the use, to some extent, of wool from the new domestic clip.

Wool required for Army orders large in current season

The invitations issued on November 20 covered bids for 5,750,000 yards of serge, 90,000 yards of 18 ounce elastique, 2,100,000 yards of flannel shirting and 2 million yards of overcoating for Army use, and 2,225,000 yards of suiting and 1,100,000 yards of overcoating for the Civilian Conservation Corps. It is roughly estimated that these contracts will require 30 to 40 million pounds of grease wool, depending upon the proportion of foreign and domestic wools specified. This estimate does not include reworked wools which may be used in overcoat materials. The requirement that orders be filled entirely with domestic wools has been relaxed and the Army may now purchase materials made of foreign as well as domestic wool.

Orders placed by the Army from June through October were estimated to require 160 to 170 million pounds of wool, greasy shorn basis. Hence, requirements for Army fabrics through June 30, 1941 will total about 200 million pounds, greasy shorn basis, chiefly fine domestic wools.

Annual wool goods requirements of the Army under the National Defense Program as now constituted are likely to be smaller in the next few years than in the current year, according to the Coordinator of National Defense Purchases. In the present situation it was necessary to provide complete

initial equipment as well as subsistence and reserve stocks for the entire Army in training. In the future it will be necessary to provide only for replacement of articles as they wear out.

Decline in Southern Hemisphere wool production indicated; carry-over larger

Production of wool in the five principal producing countries of the Southern Hemisphere in the 1940-41 season probably will be about 4 percent smaller than in the 1939-40 season but about 5 percent larger than the average for the 5 years 1934-38, according to preliminary estimates. Total production in the five countries, Australia, New Zealand, South Africa, Argentina, and Uruguay in the current season is estimated at 2,124 million pounds compared with 2,223 million pounds last year. Most of the apparel wool entering international trade is produced in these countries.

The decline in production in the 1940-41 season is chiefly in Australia, where almost half of the Southern Hemisphere wool clip is produced. Production in Australia is expected to be 10 percent smaller than the record clip of 1,130 million pounds produced last season. An increase in production is indicated for South Africa and New Zealand. The wool clip of these three British Empire countries will be purchased by the British Government, and sales to neutral countries are under control of the British Empire Wool Control.

Production of wool in Argentina and Uruguay in 1940-41 is estimated at 519 million pounds. This is 3 percent smaller than the 1939-40 production but is 6 percent larger than the average for the 5 years 1934-38.

The carry-over of wool into the 1940-41 season in the Southern Hemisphere was somewhat larger than in the previous season. Some of the wool remaining in Argentina and Uruguay at the close of the season had been contracted for by European countries and was still awaiting shipment. All stocks in Australia, New Zealand, and the Union of South Africa will be purchased by the British Wool Control, according to present arrangements, but wool from Australia and the Union of South Africa will be made available to United States purchasers.

Carpet	1,225	1,989	1,966	1,807	2,255	1,985	2,277
	Weekly average in hours						
Machinery activity 2/:							
Hours operated per machine in place -							
Worsted combs	39.8	51.8	51.0	51.7	64.5	62.6	72.5
Worsted spindles	26.9	39.6	38.7	35.2	50.9	43.1	51.0
Woolen spindles	30.6	39.8	39.1	41.0	45.7	49.6	52.0
Woolen and worsted looms -							
Broad	28.1	40.7	39.4	36.2	42.0	42.3	45.9
Narrow	10.5	13.2	12.4	13.3	18.6	12.7	16.5
Carpet and rug looms -							
Broad	23.4	37.4	36.5	37.0	44.1	37.5	44.6
Narrow	15.9	22.7	22.6	21.3	26.3	23.2	25.7

Import figures from the Bureau of Foreign and Domestic Commerce. Consumption and machinery activity from the Bureau of the Census.

1/ Weight of greasy, scoured, and skin wool added together.

2/ Figures for September based on 4 weeks, October on 5 weeks, January-October on 44 weeks. 1938 figures for 53 weeks ended December 31. No adjustments made for holidays.

3/ Total of shorn and pulled wool. Pulled wool, grease basis, is in condition received from pulleries and is mostly washed.
